

Provides a set of endpoints that allow partners to simulate, submit, and retrieve loan requests. These endpoints enable integration with the Clover Capital loan system, offering functionality to preview loan terms, initiate funding requests, and track the status of existing loan requests.

Base endpoint

All API requests must be directed to one of the following base URL's

Environment	URL
Production	https://api.moneymoneyinvest.com.br
Sandbox	https://apidev.moneymoneyinvest.com.br

This base endpoint serves as the root for accessing all available API resources. Ensure that all requests are properly formatted and authenticated according to the API documentation.

Authentication

The API uses JWT (JSON Web Token) for secure authentication.

During the integration process, partners must provide a previously registered **email** and **password**. Using these credentials, the partner can authenticate by calling the appropriate login endpoint to obtain an **token**.

This **token** must be included in the **Authorization header** of all subsequent requests to access protected endpoints like so:

```
Authorization: Bearer <token>
```

Ensure that the token is stored securely and refreshed as needed according to the token expiration policy.

Endpoints

Login

POST /business-partners/api/v2/login

This endpoint is used to obtain a **JWT (JSON Web Token)** for authenticating requests to the API. To access this endpoint, the partner must provide valid credentials — specifically the **email** and **password** that were registered during the integration process.

Upon successful authentication, the API will return an `token`, which must be included in the **Authorization** header of all subsequent requests to protected endpoints.

Request body

Field	Type	Description	Example	Required
email	string	Partner email registered in integration	<code>"example_user@gmail.com"</code>	Yes
password	string	Partner password registered in integration	<code>"my_password"</code>	Yes

Responses

200

When valid credentials are provided the api returns a token and refresh token to be used in other protected endpoints.

```
{
  "token": "eyJhbCc30iJIUCI1NiI7InR5...",
  "refresh_token": "eyJhbCc30iJIUCI1NiI7InR5..."
}
```

401

If invalid credentials are provided, the API will return an error indicating that the authentication has failed. In this case, ensure that the email and password submitted are correct and match the credentials registered during the integration process.

```
{
  "errors": {
    "detail": "não autorizado"
  }
}
```

Retrieve loan request

GET /business-partners/clover-capital/loan-requests/{document}

Retrieves the details of an existing loan request by providing the borrower's CNPJ (Brazilian National Registry of Legal Entities) number. This endpoint allows partners to query and access information related to a previously submitted loan request, using the CNPJ as a unique identifier.

URL parameters

Field	Description
document	Borrower CNPJ number

Responses

200

If loan request exists in our database the API will return a JSON response containing the data associated with that loan request. Additionally a unique `loan_request_id` is included in the response. The identifier can be used with other endpoints to check the status, simulate conditions or confirm a loan request.

Note: The `offer_data` field contains detailed loan simulation information and is only populated for loan requests in eligible stages. When the loan request status is `in_progress`,

denied, cancelled, fails_to_process, or lost, the offer_data field will return an empty object ({}) for security and business policy reasons.

Note: The `trackings` array provides an audit trail of the credit proposal lifecycle, capturing each status change and its corresponding timestamp. For more details on status consult `Tracking Status Table` on schemas section.

```
{
  "amount": 100402.32,
  "installments": 24,
  "loan_request_id": 900,
  "status": "approved",
  "external_status": "Pré-aprovado",
  "trackings": [
    {"status": "Pré-aprovado", "date": "2026-01-22 15:01:36.000"},
    {"status": "Proposta", "date": "2026-01-23 15:01:36.000"},
    {"status": "Assinatura", "date": "2026-01-23 15:01:36.000"},
    {"status": "Dinheiro na conta!", "date": "2026-01-26 15:01:36.000"},
  ],
  "offer_data": {
    "PercCETAnual": 79.61,
    "PercCETMensal": 5,
    "PercJurosAnual": 74.12,
    "PercJurosMensal": 4.73,
    "VlrIOF": 2819.25,
    "VlrParcela": 7643.15,
    "VlrTAC": 20,
    "VlrTotalCredito": 103241.57,
    "VlrTotalDivida": 183435.6
  }
}
```

401

If the token is expired or invalid, the API will return an **unauthenticated** error. To resolve this, you can re-authenticate by logging in again using valid credentials to obtain a new **token** .

When a token expires or are invalid a unauthenticated error is returned. To address this error is possible to try login again.

```
{  
  "error": "unauthenticated"  
}
```

404

The provided `loan_request_id` was not found in our database.

This may occur for one of the following reasons:

- The loan request has been deleted or is no longer available.
- An incorrect or invalid `loan_request_id` was provided.

Please verify the identifier and try again.

```
{  
  "errors": {  
    "detail": "Loan request not found"  
  }  
}
```

500

An unexpected internal error has occurred.

Please contact the system administrator or support team for further assistance.

```
{  
  
  "errors": {  
    "detail": "Internal Server Error"  
  }  
}
```

Simulate loan request

POST /business-partners/clover-capital/loan-requests/{loanRequestId}/simulation

Simulates a funding request based on the specified amount and number of installments.

This endpoint is used for simulation purposes only — no actual funding is requested or processed.

URL parameters

Field	Description
loanRequestId	ID of loan request retrieved in consult route

Request body

Field	Type	Description	Example	Required
requested_amount	number	The requested amount value	100402.32	Yes
requested_installments	integer	The number of installments	24	Yes

Responses

200

The API returns a JSON response containing simulation data based on the provided conditions for an existing loan request.

```
{
  "loan_request_id": 900,
  "requested_amount": 100402.32,
  "requested_installments": 24,
  "simulation_data": {
    "PercCETAnual": 79.61,
    "PercCETMensal": 5,
```

```
"PercJurosAnual": 74.12,
"PercJurosMensal": 4.73,
"VlrIOF": 2819.25,
"VlrParcela": 7643.15,
"VlrTAC": 20,
"VlrTotalCredito": 103241.57,
"VlrTotalDivida": 183435.6
}
```

401

If the token is expired or invalid, the API will return an **unauthenticated** error. To resolve this, you can re-authenticate by logging in again using valid credentials to obtain a new **token**. When a token expires or is invalid, an unauthenticated error is returned. To address this error, it is possible to try login again.

```
{
  "error": "unauthenticated"
}
```

404

The provided `loan_request_id` was not found in our database.

This may occur for one of the following reasons:

- The loan request has been deleted or is no longer available.
- An incorrect or invalid `loan_request_id` was provided.

Please verify the identifier and try again.

```
{
  "errors": {
    "detail": "Loan request not found"
  }
}
```

```
}
```

422

The requested amount is invalid.

Please ensure the value meets the minimum and maximum limits allowed by the system in the consult request.

```
{
  "errors": {
    "detail": "Invalid requested limit"
  }
}
```

422

The requested installments is invalid.

Please ensure the value meets the minimum and maximum limits allowed by the system in the consult request.

```
{
  "errors": {
    "detail": "Invalid requested duration"
  }
}
```

500

An unexpected internal error has occurred.

Please contact the system administrator or support team for further assistance.

```
{
  "errors": {
    "detail": "Internal Server Error"
  }
}
```

Get loan request status

GET /business-partners/clover-capital/loan-requests/{loanRequestId}/status

Retrieves the current status of a loan request.

URL parameters

Field	Description
loanRequestId	ID of loan request retrieved in consult route

Responses

200

The API will return a JSON containing the `loan_request_id` and a `status` field that represents the current state of a given loan request. Consult the **Loan request status table** and **loan request external status table** for more information.

```
{
  "external_status": "Pré-aprovado",
  "loan_request_id": 1,
  "status": "approved"
}
```

401

If the token is expired or invalid, the API will return an **unauthenticated** error. To resolve this, you can re-authenticate by logging in again using valid credentials to obtain a new **token**.

When a token expires or are invalid a unauthenticated error is returned. To address this error is possible to try login again.

```
{  
  "error": "unauthenticated"  
}
```

404

The provided `loan_request_id` was not found in our database.

This may occur for one of the following reasons:

- The loan request has been deleted or is no longer available.
- An incorrect or invalid `loan_request_id` was provided.

Please verify the identifier and try again.

```
{  
  
  "errors": {  
    "detail": "Loan request not found"  
  }  
}
```

500

An unexpected internal error has occurred.

Please contact the system administrator or support team for further assistance.

```
{
  "errors": {
    "detail": "Internal Server Error"
  }
}
```

Confirm loan request

POST /business-partners/clover-capital/loan-requests/{loanRequestId}/confirm_simulation

This endpoint is used to **confirm** a previously simulated loan request on database. It finalizes the funding process for a loan request that has already been created and simulated.

To confirm a loan, a valid `loan_request_id` must be provided. This ID should reference an existing loan request that has successfully passed through prior steps. Upon successful confirmation, the loan is officially registered and processed by the system.

URL parameters

Field	Description
loanRequestId	ID of loan request retrieved in consult route

Request body

Field	Type	Description	Example	Required
contact_name	string	Contact name	“João Silva”	Yes
contact_email	string	Contact email	“ example_user@gmail.com ”	Yes
contact_phone_number	string	Contact phone number	“11996937265”	Yes
installments	integer	Number of requested installments	12	Yes

Field	Type	Description	Example	Required
requested_amount	number	Requested amount value	1500.42	Yes

Responses

200

Successful request

No body returned for response

401

If the token is expired or invalid, the API will return an **unauthenticated** error. To resolve this, you can re-authenticate by logging in again using valid credentials to obtain a new **token**

When a token expires or are invalid a unauthenticated error is returned. To address this error is possible to try login again.

```
{  
  
  "error": "unauthenticated"  
  
}
```

404

The provided `loan_request_id` was not found in our database.

This may occur for one of the following reasons:

- The loan request has been deleted or is no longer available.
- An incorrect or invalid `loan_request_id` was provided.

Please verify the identifier and try again.

```
{  
  "errors": {  
    "detail": "Loan request not found"  
  }  
}
```

422

The requested amount is invalid.

Please ensure the value meets the minimum and maximum limits allowed by the system in the consult request.

```
{  
  "errors": {  
    "detail": "Invalid requested limit"  
  }  
}
```

422

The requested installments is invalid.

Please ensure the value meets the minimum and maximum limits allowed by the system in the consult request.

```
{  
  
  "errors": {
```

```
    "detail": "Invalid requested duration"
  }
}
```

500

An unexpected internal error has occurred.

Please contact the system administrator or support team for further assistance.

```
{
  "errors": {
    "detail": "Internal Server Error"
  }
}
```

Update contact number

PATCH /business-partners/clover-capital/loan-requests/{loan_request_id}/change-contact-number

Updates the contact phone number for a loan request that failed initial contact attempts. When successful, the loan request status is rolled back from `fail_to_contact` to `contact_request_sent`, triggering a new contact attempt within the next 24 hours. This operation is only permitted when the current status is `fail_to_contact`.

URL parameters

Field	Description
loan_request_id	Unique identifier of a the lead

Request body

Field	Type	Description	Required
contact_phone_number	string	The new contact phone number that will be used in lead process.	true
contact_name	string	New contact name tha will used in lead process.	false

Responses

200

Contact number successfully updated

```
{
  "message": "Contact for this lead was updated."
}
```

400

Invalid body request

```
{
  "errors": {
    "detail": "Bad Request"
  }
}
```

400

The lead can't be updated on current status.

```
{  
  
  "errors": {  
    "detail": "Cannot update lead contact information. Current status:  
'in_progress'. This operation is only allowed when status is  
'fail_to_contact'."  
  }  
}
```

401

If the token is expired or invalid, the API will return an **unauthenticated** error. To resolve this, you can re-authenticate by logging in again using valid credentials to obtain a new **token**. When a token expires or is invalid, an unauthenticated error is returned. To address this error, it is possible to try logging in again.

```
{  
  "error": "unauthenticated"  
}
```

404

Provided lead id not found

```
{  
  "errors": {  
    "detail": "Lead not found"  
  }  
}
```

422

If the `contact_phone_number` is invalid the API will return a Unprocessable Entity error. The accept number format is a string with 11 numeric digits.

```
{  
  
  "errors": {  
    "contact_phone_number": [  
      "Phone fields should be only numbers and contain 11 digits."  
    ]  
  }  
}
```

500

An unexpected internal error has occurred.

Please contact the system administrator or support team for further assistance.

```
{  
  
  "errors": {  
  
    "detail": "Internal Server Error"  
  
  }  
}
```

Create a new loan request

`POST /business-partners/clover-capital/loan-requests`

This endpoint is used to create a new loan request. Upon successful creation, the loan is officially registered and processed by the system.

Duplicate Prevention & Caching Logic:

To avoid duplicate loan requests, the system implements a caching mechanism:

- If a loan request already exists for the same registration document (CNPJ) and was created within the last 30 days, the existing loan request will be returned instead of creating a new one.
- **Update on Specific Statuses:** When attempting to create a new loan request for an existing cached lead with status `fail_to_contact`, `contact_updated`, `in_progress`, or `in_quoting`, the system will update the existing loan request with the new information provided in the request body, rather than returning it unchanged.
- If the existing loan request is older than 30 days, a new loan request will be created regardless of its status.

Note:

The 30-day interval is configurable and may change based on our business logic. The current configuration value is provided in response.

Request body

Field	Type	Description	Example	Required
<code>contact_name</code>	<code>string</code>	Contact name	"João Silva"	Yes
<code>contact_email</code>	<code>string</code>	Contact email	" example_user@gmail.com "	No
<code>contact_phone_number</code>	<code>string</code>	Contact phone number	"11996937265"	Yes
<code>registration_code</code>	<code>string</code>	Borrower CNPJ number	93464951000100	Yes
<code>revenue</code>	<code>number</code>	Monthly average revenue of company	84500.00	Yes
<code>requested_amount</code>	<code>number</code>	Requested amount value	75000.00	Yes
<code>opt_in</code>	<code>boolean</code>	Indicates customer consent for data processing	true	No

Field	Type	Description	Example	Required
opt_in_ip	string	Client IP address at the time of consent	"192.168.1.100"	No*
opt_in_timestamp	string	ISO 8601 timestamp of when consent was given	"2026-06-02T15:30:00Z"	No*
opt_in_signer_name	string	Name of the person who gave consent	"João Silva"	No*

***Opt-in fields:** When `opt_in` is `true`, the fields `opt_in_ip`, `opt_in_timestamp`, and `opt_in_signer_name` are required. These fields are used to create a consent record associated with the loan request. When `opt_in` is `false` or not provided, these fields are ignored.

Responses

200

Proposal successfully registered.

```
{
  "loan_request_id": 123,
  "message": "Lead registered successfully",
  "created_at": "2026-01-27 17:45:17",
  "duplication_interval_in_days": 30
}
```

401

If the token is expired or invalid, the API will return an **unauthenticated** error. To resolve this, you can re-authenticate by logging in again using valid credentials to obtain a new **token**.

When a token expires or is invalid, an unauthenticated error is returned. To address this error, it is possible to try login again.

```
{  
  
  "error": "unauthenticated"  
  
}
```

500

An unexpected internal error has occurred.

Please contact the system administrator or support team for further assistance.

```
{  
  
  "errors": {  
    "detail": "Internal Server Error"  
  }  
}
```

Webhook - Status Change Notification

Whenever the status of a loan request changes, the system automatically sends a **webhook notification** to the partner's registered endpoint via an HTTP `POST` request.

This allows partners to receive **real-time updates** about the lifecycle of their loan requests without the need to poll the API.

Configuration

During the integration process, the partner must provide a **webhook URL** where notifications will be delivered. This URL is registered internally and associated with the partner's account.

Request body (sent by our API)

The webhook payload varies depending on the current status of the loan request.

For eligible statuses (`approved`, `comite_approved`, `formalization`, `won`):

```
{
  "id": 900,
  "status": "approved",
  "details": null,
  "rating": "B2",
  "availableCredit": 100402.32,
  "loanTerm": 24,
  "loanTax": 4.73,
  "created_at": "2026-01-22T15:01:36"
}
```

For non-eligible statuses (denied, lost, in_progress, etc.):

```
{
  "id": 900,
  "status": "denied",
  "details": "Credit policy restriction",
  "rating": null,
  "offerUrl": null,
  "availableCredit": null,
  "loanTerm": null,
  "loanTax": null,
  "created_at": "2026-01-22T15:01:36"
}
```

Webhook body fields

Field	Type	Description	
id	integer	The unique identifier of the loan request.	
status	string	The current status of the loan request. Consult the Loan request status table for possible values.	
details	string or null	Additional details about the status change. Populated for denied/lost	

Field	Type	Description	
		statuses, null otherwise.	
rating	string or null	The credit rating assigned to the loan request. Only available for eligible statuses.	
availableCredit	number or null	The approved credit amount. Only available for eligible statuses.	
loanTerm	integer or null	The loan term in months. Only available for eligible statuses.	
loanTax	number or null	The monthly interest rate. Only available for eligible statuses.	
created_at	string	The timestamp of when the loan request was created.	

Expected response

The partner's webhook endpoint should return an HTTP `2xx` status code to acknowledge receipt of the notification. If the request fails, the system will retry up to **3 times** within a 7-day window.

Schemas

Loan request external status table

Status	Description
Pré-aprovado	The loan has been pre-approved based on initial analysis and is ready to move to the next stage.
Solicitação de contato enviada	The request was send and in analisys.
Proposta	The committee has reviewed and approved the loan request.
Assinatura	The loan signature was ben requested and waiting for signers
Dinheiro na conta!	The loan was paid.
Não conseguimos contato, verifique seu número e tentaremos novamente	Unable to contact the registered number on the lead

Status	Description
Tentaremos contato novamente em até 24h	The phone number on the lead has been updated. A new contact attempt will be made within 24 hours.
Proposta cancelada	The loan request has been cancelled and is no longer active.
Analizamos sua solicitação e desta vez não conseguimos aprová-la devido a políticas internas de crédito.	The loan request has been rejected after review.
Ocorreu um erro. Entraremos em contato em até 24hs úteis.	An error occurred, and the loan request could not be processed.
Cliente desistiu da oferta	The opportunity for this loan was lost (e.g., the client opted out or went with another provider).

Tracking Status Table

Data table specifying details about loan tracking statuses

Status	Description
Pré-aprovado	The loan has been pre-approved based on initial analysis and is ready to move to the next stage.
Proposta	The committee has reviewed and approved the loan request.
Assinatura	The loan signature was ben requested and waiting for signers
Dinheiro na conta!	The loan was paid.
Não aprovado	The loan request has been rejected after review.

Loan request status table

Data table specifying details about loan request status

Status	Description
in_progress	The loan request is currently being processed.
fails_to_process	An error occurred, and the loan request could not be processed
fail_to_contact	The loan request is on hold due to failure to contact the customer using the provided contact phone number.

Status	Description
contact_updated	The contact phone number has been updated. A new contact attempt will be made within the next 24 hours.
approved	The loan request has been approved.
in_quoting	The loan request is in the quotation phase.
denied	The loan request has been rejected after review.
comite	The loan request is under review by a credit or decision committee.
comite_approved	The committee has reviewed and approved the loan request.
formalization	The loan is in the formalization phase, awaiting signatures or document processing.
lost	The opportunity for this loan was lost (e.g., the client opted out or went with another provider).
won	The loan request was successful and secured the business.

API version 1.0.10
